

BIG DATA PROCESSING.

Lab03: On Additional Big Data Processing Tools.

BACKGROUND.

During the semester we will cover in detail the Big Data Processing tools:

- Spark Core
- Spark SQL
- Spark Streaming
- Spark Structured Streaming

Besides them, Spark also contains:

- A library on Graph algorithms
 - Spark GraphX (for working with RDDs)
 - Spark GraphFrames (for working with DataFrames)
- A library on Machine Learning algorithms
 - Spark MLlib (for working with RDDs)
 - Spark ML (for working with DataFrames)

And, of course, aside of Spark there are many other existing Big Data Processing tools.

TASKS / EXERCISES.

Survey these Big Data Tools, and select one that is of interest to you:

- Describe briefly the tool and its functionality.
- Describe and implement a novel use-case applying this tool. You can base your use-case either on the reference dataset **Dublin Bus GPS sample data from Dublin City Council (Insight Project)**> or on the alternative dataset you chose in Lab02.
